

ICDL Health addresses the growing importance of, and dependence on, health informatics systems (HIS). The appropriate use of HIS enables health systems to be more effective, efficient and evidence based.

ICDL Health provides a framework of the skills and knowledge needed by a health professional or support worker in order to operate a HIS safely and securely. Electronic health records are an important and growing feature of modern healthcare systems. ICDL Health reinforces existing education and validates the understanding of digital patient records concepts.

Developed in co-operation with an international expert group of health informatics professionals, ICDL Health addresses the general learning outcomes identified by the International Medical Informatics Association (IMIA) with regard to the appropriate and secure use of health informatics systems.

On completion of this module the candidate will be able to:

- Understand the key features of a Health Information System (HIS).
- Use a HIS safely and efficiently.
- Understand the ethics, rules, and regulations relating to HIS.
- Understand confidentiality, security, and access control when using a HIS.
- Understand and interpret electronically recorded data.

The ICDL Health Module consists of:

- The ICDL Health Study Guide – a study guide for the ICDL Health certification exam.
- ICDL Health Certification Exam – a secure web-based exam that is administered in a proctored environment.
- ICDL Health Certificate – an official ICDL Certificate that is issued to a candidate on successful completion of the ICDL Health Certification Exam.

HOW DO I GET STARTED?
